- B. An alloy of copper and Lead
 - C. An alloy of aluminium and tin
 - D. An alloy of copper and sulphur
-

Is Bronze an alloy?

Yes, bronze is an alloy made up of copper and tin.

Bronze is an alloy consisting primarily of **copper**, commonly with about 12-12.5% **tin** and often with the addition of other metals (such as aluminium, manganese, nickel or zinc) and sometimes non-metals or metalloids such as arsenic, phosphorus or silicon.
